1 Introduction

This deliverable was developed in the task 4.3 "Research Careers (assessment)". A part of this task was to deal with the balance in the assessment of academics and their research careers. Another part was to pilot the use of Artificial Intelligence in research assessment. In both field substantial developments took place since the REUNICE project was planned and started. Therefore, we will state on this development in the field of research assessment (see chapter 3) after we explained how this deliverable D 4.3 "EUNICE awards to reward outstanding trajectories" relates to the task 4.3 "Research Careers (assessment)" (see chapter 2). Afterwards, the piloting of the use of Artificial Intelligence in research assessment is described in chapter 4. Finally, the generated EUNICE Awards are described in chapter 5. After description of the awards itself the evaluation process and criteria are explained, together with the procedures of data acquisition for those awards. At the end, a timetable shows the planned schedule for the EUNICE Awards.

2 Relation to the Work Programme

This deliverable D 4.3 "EUNICE awards to reward outstanding trajectories" belongs to the task 4.3 "Research Careers (assessment)". This task deals with the balance in the assessment of academics and their careers. The assessment needs to be balanced regarding differences in national academic systems, and has to take into account gender equality, diversity, and Open Science aspects. All that contributes towards the European University Transformation Module of development and implementing strategies for strengthening human capital in research and innovation and for enabling balanced brain circulation [1].

To be able to acknowledge outstanding academic trajectories and to promote the excellence in research and innovation in our emerging European University EUNICE, the creation of "EUNICE Awards" were provided in this deliverable D 4.3. These EUNICE Awards not only allow for the acknowledgement and promotion of excellence within EUNICE, they also offer a suitable use cases and application of the assessment procedures for research careers. Furthermore, the offer of a reward also allows to call for applications with a defined set of information which will be submitted by the academics themselves. That ensures the comprehensiveness of the information and avoids data protection issues, because the information/data was assembled for the purpose of research career assessment.

The created EUNICE Awards are also part of the implementation of strategies for strengthening human capital in research and innovation. The awards will guide the measures implemented in REUNICE Task 4.4 "Promoting Talents" (e.g. the network of research and innovation support staff or the coaching and mentoring programmes) in strengthening human capital by focusing on the most promising candidates.

Parallel to the REUNICE project there are very recent developments not only in research assessment, but also in research management. As these recent developments will affect the REUNICE work especially in this task 4.3, we will summarise these developments in the following chapter. We will focus there on aspects which are most important for this deliverable, like research assessment and research management.

3 Recent Development in Research Assessment

After finalising and submitting the Description of Work for this REUNICE project, the European Commission started a process of advancing the European Research Area (ERA) with the Communication to the European Parliament, the Council, the European Economic and Social Committee and the Committee of the Regions "A new ERA for Research and Innovation" (COM(2020) 628) in September 2020 [2]. That COM Communication was followed by a Council conclusions on the "New European Research Area" [3] which in November 2021 led to the Council Recommendation 2021/2122 on a Pact for Research and Innovation in Europe [4]. Both contained a list of actions which were later developed into the ERA Policy Agenda [5].

3.1 ERA Policy Agenda and its impact on REUNICE

The ERA Policy Agenda in its recent version from November 2021 comprises of 20 Actions which contributes to the priority areas defined in the Council Recommendation on a *Pact for Research and Innovation* [4]. This agenda covers the period 2022-2024. Many of the 20 actions have an impact on the work done in this REUNICE project. In particular, REUNICE WP4 "Promoting excellence in research and innovation, fostering diversity, inclusiveness and gender equality" has links to many actions. Therefore we decided to screen the 20 actions here for their respective impact on the work done in REUNICE. For each of the 20 actions one or more work packages of REUNICE are mentioned in the following Table 1, which have the highest cross sections with this actions:

Table 1: All actions from the ERA Policy Agenda and its impacts on (R)EUNICE

Nr	Title of the Action	Impact on RE- UNICE	REUNICE WPs most af- fected	Commend
1	Enable the open sharing of knowledge and the re-use of re-search outputs, including through the development of the European open science cloud (EOSC)	Strong	WP3 (WP2, WP5)	WP3 is directly dealing with Open Science, WP2 develops infrastructure for sharing with other sectors and WP5 deals with sustainable re-use of research output especially in the business and society sector.
2	Propose an EU copyright and data legislative and regulatory framework fit for	Weak	(WP2)	The data platforms developed in WP2 could probably profit from new regulatory framework
3	Advance towards the reform the assessment system for research, researchers and institutions to improve their quality, performance and impact	Strong	WP4	Very relevant for WP4. Finally, the CoARA Co- alition on Advancing Research Assessment de- veloped from there. See 3.2 for special impact assessment on REUNICE.
4	Promote attractive and sustaina- ble research careers, balanced talent circulation and interna-	Strong	WP4	Very relevant to WP4, especially for this task 4.3 and this deliverable, as well as for the ongoing task 4.4

	dination and direction of R&I	Weak	

From the above shown Table 1, it becomes obvious that 4 of the 20 actions have a strong impact on the proposed work in WP4 of REUNICE. One outcome of **ERA Action 3** was the creation of a coalition of European research funders and research performers who agree on a new approach for research assessment, following wide and inclusive consultations at European and international level. That coalition has been created as "CoARA" and its implications with WP4 of REUNICE and especially this deliverable are described in detail in the following paragraph 3.1 on page 11.

The ERA Action 4 focusses on improving employment and working conditions for researchers (including HRS4R / task 4.1 of REUNICE), as well as on support measures to improve attractiveness of research careers in academia and beyond. Here contributes REUNICE with its Network of Support Staff (task 4.4), which supports researchers EUNICE-wide in their career development. Furthermore, a pilot with European University alliances, the "European Framework for Research Careers", is mentioned as an outcome. Implementation of this framework has started in July 2023 (see [6]). At the moment, Member States will discuss the Commission proposal for a Council Recommendation, including the new Charter for Researchers, with a view to the final adoption by the Council. The WP4 team will follow the outcome of this policy process and adapt existing or implement new measures in the area of research career support accordingly.

ERA Action 5 is dealing with the promotion of gender equality. All EUNICE partner universities are taking part in Horizon Europe and hence are required to have a Gender Equality Plan in place. Together with additional national regulations it is ensured that measures are in place to ensure gender equality especially in recruitment and to counteract gender-based violence. Via the strong cooperation with the non-academic sector, all EUNICE partner universities will proliferate gender equality measures also into the non-academic sector.

Finally, **ERA Action 17** wants to enhance the strategic capacities of Europe's public research performing organisations. The main measure here is to strengthen the management of science by the Science Management Initiative. Several project were funded here to define the role of a European Science Manager and to support the work by providing material for information and training. Those projects are e.g. the CARDEA Project (https://www.ucc.ie/en/cardea/cardeahub/) and the RM Roadmap Project (https://www.rmroadmap.eu/). Both projects deal with professional development of Research Management, Dissemination & Communication), and foster the co-creation of the future of Research Management. Those activities will be incorporated into the work in task 4.4 of that REUNICE work package.

3.2 CoARA and its impact on REUNICE

CoARA, the <u>Coalition</u> for <u>Advancing Research Assessment</u>, is a direct result from ERA Action 3 and was initiated in January 2022. More than 350 organisations from over 40 countries were involved. The founding organisations represent a broad diversity of views and perspectives. Involved are e.g. public and private research funders, universities, research centres, institutes and infrastructures, associations and alliances thereof, national and regional authorities, accreditation and evaluation agencies, learned societies and associations of researchers, and other relevant organisations.

The aim of that coalition was to enable a systemic reform of the research assessment of researchers, research projects, research units and research organisations on the basis of common principles within an agreed timeframe. A **Drafting Team** composed of representatives from the European University Association (EUA), Science Europe, the European Commission, and Dr. Karen Stroobants, in her individual capacity as consultant with expertise in research on research, was creating a Draft Agreements. Inputs and comments from **MS representatives** (ERA Forum, ERAC) was used and the draft was iteratively revised by the **Core Group** (18 organisations and 2 young scientists) to create the **Final Agreement**. This Final Agreement "Agreement on reforming research assessment" [7] was released on 20th of July 2022, and can be signed by any interested entity. At the date of this deliverable (end of September 2023) the agreement was signed by the following EUNICE Partner Universities:

- Poznan University of Technology
- University of Mons
- Université Polytechnique Hauts-de-France
- University of Vaasa
- Karlstad University

Two self-commitment are connected to the signature:

- By the end of 2023 or within one year of signing the Agreement the signatories agree to share with each other and with their community how their organisation has started the process or reviewing or developing criteria, tools and processes in line with the core commitments.
- 2. At an end of 2027 or within five years of signing the Agreement the signatories agree to regularly demonstrate progress towards reviewing, developing and evaluating criteria, tools and processes that fulfil the Commitments.

Beside this above mentioned time frame all signatories agree on 3 basic commitments:

- I.To **base their actions** on the Principles for overarching conditions (e.g. comply with ethics and integrity rules, safeguard freedom of scientific research, ensure independence and transparency) and on Principles for assessment criteria and processes (e.g. criteria like quality and impact, diversity, inclusiveness and collaboration).
- II.To **implement the 10 enumerated commitments** like the core commitments (e.g. Recognise the diversity in research, base assessment on qualitative evaluation, abandon

inappropriate uses of Journal Impact Factor (JIF) and h-index, avoid the use of rankings) and the supporting commitments (commit resources, review and develop research assessment criteria, raise awareness of research assessment reform, exchange practices and experiences, communicate progress made, evaluate practices, criteria and tools).

III.To organise and to operate the Coalition along **organisational principles** like membership, establishment of working groups, internal communication, support of the coalition, etc.

With its proposed principles and especially with its 10 commitments, CoARA has direct impact on the work done in task 4.3 and hence for this deliverable. The creation of awards always requires assessment of the research and the researcher(s). Also, not all EUNICE partner Universities have signed the CoARA Agreement yet, it should be the ambition of our European University EUNICE to comply with the proposed principles and commitments in the CoARA Agreement. First, the proposed criteria in the Description of Work for REUNICE contain indicators for social inclusion, gender equality, diversity, and Open Science aspects and hence are in line with the CoARA Agreement. Furthermore, a detailed check for all proposed awarding criteria for the EUNICE award are given in Chapter 5 below.

4 Piloting Artificial Intelligence in Research Assessment

This work was done in close collaboration with WP3 "Promotion Open Science as result of EUNICE researcher's collaboration" and is operation on data acquired there. In WP3 a blockchain-based collaborative platform for Open Science was created (see Deliverable D3.2). The platform allows researchers to create profiles and upload their work (e.g. paper, data, monographs ...). All data there will be Open-Access to promote Open Science. As a speciality, and to deeply implement the Open-Science-Idea even in the technical basics of the platform, a blockchain-based database will be used. An example use case of that platform is shown in Figure 1.

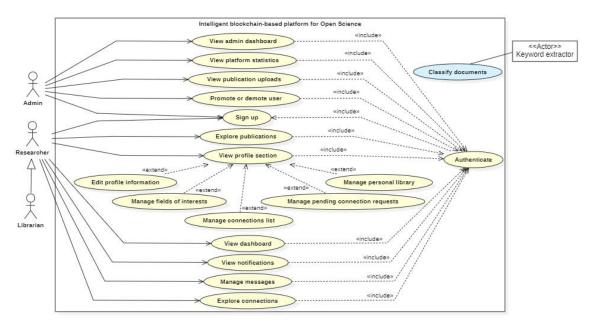

Figure 1: Example of use case for the blockchain-based collaborative platform for Open Science.

In an Action plan regarding collaboration between European Universities alliances in the domain of AI this available data now can be used to access the research done by the researchers which have uploaded their Open-Access publications, data or monographies. The interaction of the researcher on that platform are used as an indicator for possible cooperation and shared interests. AI is used for automated translation, workflow assistance, user profile learning and enhanced search engine (based on a Large-Language-Model (LLM) to define/train).

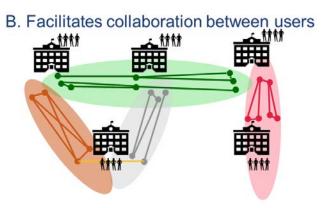

Automated translation, workflow assistance, user profile learning, enhanced search engine (based on a LLM to define/train)

Figure 2: Research assessment using AI facilitates collaboration between uses.

With that approach it is possible to create a pilot that enables:

- Clustering of existing projects
- ➤ Generating recommendations for researchers to join projects by comparing the similarity level between existing projects
- Generating recommendations for participants that want to fund individual research projects

5 EUNICE Awards

5.1 Why EUNICE Awards?

The task for that deliverable 4.3 was to assess research careers. This is a preliminary work for the next task 4.4 "Promoting talents": Before talents can be promoted, they must be identified. That is done by assessment of research and researcher careers. After finalising the Description of Work of that REUNICE project a reform of the research assessment was initiated on European level by the ERA Policy Agenda [5] and, more specifically, by the ERA Action 3 and the resulting establishment of the Coalition on Advancing Research Assessment – CoARA [7]. After evaluating this ongoing process (see 3.2) it was clear that it heavily affects REUNICE and the 10 commitments in the CoARA Agreements have to be considered in the work here. Although assessment of research and researcher careers is an important competence for a strategic management process in a European University like EUNICE, and hence is one of the transformation modules for a European University (see [1]), it also needs a use case that is as transparent as possible. A very natural use case for research career assessment is of course to honour outstanding careers with excellent results with an award. As there are always different categories (e.g. individual researchers or research groups) a set of EUNICE awards was created.

5.2 Description of the awards

The awards are designed to "to reward outstanding trajectories of scientists and groups/departments". First, that implies that generally 2 types of awards had to be designed: Awards on the individual level (for single researchers), and awards on a group level (for research groups). Second, an "outstanding trajectory" not only rewards straight-forward in research or teaching, it also should include participation in the academic society as well as societal impact of the work that is honoured by the awards. Third and last, it is always very difficult to decide for only one award when the work comes from very different disciplines, which have to be compared. Therefore we decided to award three categories (EUNICE Gold award, EUNICE Silver award, and EUNICE Bronze award), and a special EUNICE Young Talent Award for young researchers (for Career Stages R1 – R2). Those three properties of the EUNICE Awards are summarised in the following bullet points:

- A) Awards will be on individual level (for single researchers), and on group level (for research groups)
- B) Awards will recognises achievements in research, teaching, participation in academic societies, and the societal impact of the work
- C) The EUNICE Awards will be rewarded in 3 categories, Gold, Silver and Bronze plus a special EUNICE Young Talent Award for young researchers in Career Stages R1 R2

The first two properties of the EUNICE Awards will determine the evaluation criteria, which are summarised in the following Evaluation Matrix in Table 2. Evaluation criteria

are given for the individual level and group level, separately. Additionally, those evaluation criteria are checked to match the CoARA Principles.

Table 2: Evaluation matrix for the EUNICE Awards including comparison to the CoARA principles.

				ability) in research teams at all levels, and in to content of research and innovation.

The prizes will be awarded on a EUNICE General Assembly (GA) and will comprise mainly by EUNICE-internal measures to further support the research topics of the laureates. Therefore vouchers for consulting services and participation on mentoring programs will be awarded. Additionally, an International Student Club (a measure proposed in the follow-up project EUNICE4U) will be offered to the winners. All prizes are shown in the following Table 3:

5.3 Evaluation

Like mentioned in award property C) there will be three categories, Gold, Silver and Bronze plus a special EUNICE Young Talent Award for young researchers in Career Stages R1 – R2. For evaluation of all candidates the acquired data (see 5.4 Data acquisition) will be given to a jury, together with the evaluation criteria listed in the evaluation matrix of Table 2. Each of the four main criteria for achievements (Research, Teaching, Participation and involvement in academic society, societal impact and value) will be evaluated with points on a scale from 0 to 15. A threshold of 8 points will be applied to each main criterion to ensure sufficient contribution to every criterion. The jury will consist of EUNICE-internal and external experts appointed by the EUNICE Steering Committee. The jury shall consist of 10 persons, from each country of the EUNICE consortium one person. That shall ensure the balancing of the different national academic systems. Additionally, the jury shall be composed of experts from different scientific fields to be able to cover a broad range of proposals.

The jury will generate two lists of candidates ranked by the sum of the points awarded for each main criterion. The first list will contain all individual researchers and the second list will contain all research groups. The first three candidates of each list will be rewarded by the EUNICE Award in the category Gold, Silver and Bronze plus the first researcher / research group leader of each list with the Career Stages of R1 or R2 will be awarded the Young Talents Award.

5.4 Data acquisition

The acquisition of the needed data for the evaluation (see evaluation matrix in Table 2) is sensitive for two reasons. First, openly available data from e.g. publication indexes, teaching databases and websites is often not complete in the sense of the evaluation matrix. A research for the missing data would be necessary, and data from different (closed) databases need to be aggregated and linked to the openly available data. That leads to the second issue with the General Data Protection Regulation (GDPR): It cannot be assumed that the openly available data were meant to be linked to other data. Hence, a new confirmation declaration for data linkage must be obtained. Those two reasons led us to believe that a competition with an active application by the candidates themselves is the best solution. The required data will be collected via an online form. We used the self-hosted survey tool LimeSurvey for that purpose and programmed a survey to meet the evaluation criteria from Table 2. Screenshot of the survey are shown here. The (not yet active) survey can be viewed directly at https://www.b-tu.de/umfragen/index.php/899173?lang=en.

EUNICE Award Survey: Starting page (left) and Basic Information page (right).

EUNICE Award Survey: Question for research part (left) and teaching part(right).

EUNICE Award Survey: Question for Participation and involvement in academic society (left) and for Societal impact and value (right).

5.5 Time table

With delivery of the EUNICE Awards the awards can now be confirmed by the EUNICE Steering Committee and the awarding process can be started afterwards. The awarding process will be started by activating the surveys, accompanied by advertisement the EUNICE Awards. A time span of 3 month for advertisement and submitting the application seem to be reasonable. The assessment of the jury will take another 3 month so that the awarding ceremony is expected to take place on a General Assembly in the 3rd quarter of 2024.

6 Summary

In this Deliverable, we created EUINCE Awards, which rewards single academics as well as research groups and which takes care of the balancing of the different national academic systems, and acknowledges of the independence and individual qualities and ambitions of academics and their team performances. The EUNICE Awards have to be affirmed by the EUNICE Steering Committee. Then an application process will start, which was developed for this deliverable. The awarding ceremony is foreseen in the 3rd quarter of 2024 at the end of the REUNICE project.

Furthermore, a pilot for the use of Artificial Intelligence in Research Assessment was initiated together with WP3 of REUNICE. With that pilot it is possible to cluster existing projects, to generate recommendations for researchers to join projects by comparing the similarity level between existing projects, and to generate recommendations for participants that want to fund individual research projects.

Additional work was invested into the evaluation of recent developments in Research Assessment on European level. The ERA Policy Agenda as well as the CoARA Coalition that emerged from the ERA Policy Agenda were developed after the proposal of the REUNICE project. Both have a reasonable impact on the work done in the REUNICE project. Therefore, we evaluated the impact on the REUNICE project for all ERA Action and summarised it in Table 1. We will discuss the table with all REUNICE work packages in the near future. The impact of the CoARA Coalition is most relevant for this deliverable and is discussed in paragraph 3.2.
